

Fact Sheet - Marketing Material

NN Hellas Equity Fund (for Institutional clients)

(Authorization: Decision 268/21-06-2017 of HCMC)

31/05/2022

Investment Policy

The investment objective of the fund is to achieve capital appreciation by investing primarily in equities of companies listed on the Athens Stock Exchange (ASE).

To achieve its objectives, the Mutual Fund invests at least 65% of its assets in equities on the Athens Stock Exchange. Secondly it may also invest part of its assets in equities of foreign companies seeking to maximize its yield. It may also invest much smaller percentages in other transferable securities, money market instruments, fixed income instruments, bank deposits and units or shares in Undertakings for Collective Investments in Transferable Securities (UCITS) or other equivalent Undertakings.

The acquisition or redemption of units is possible every (working) day following the shareholder's request, on the corresponding subscription or redemption price, as calculated in accordance with the fund's Regulation and published on the website of 3K Investment Partners (www.3kip.gr).

The mutual fund's Benchmark is the Total Return Index/Athens Stock Exchange General Index. The fund implements active management over the benchmark, given that the selection of the fund's holdings in relation to the composition of the benchmark is at the discretion of 3K Investment Partners, in the sense that for the portfolio management, 3K Investment Partners does not follow the composition of the benchmark. The fund's benchmark is used for comparison purposes only.

Any profits occurred may be reinvested or distributed to unit holders by issuing new shares or by paying cash dividends at the discretion of 3K Investment Partners MFMC.

**The investment policy was taken from the Key Investor Information Document (KIID). The capital and/or return are not guaranteed, are they protected.*

Risk and Return Profile

Synthetic Risk and Reward Indicator (SRRRI)

Lower Risk-Typically lower rewards Higher Risk-Typically Higher rewards

The mutual fund was established in 2017 and therefore there is no historical data on which would allow the calculation of the risk and performance profile. Placed in risk category 7 as it invests predominantly in stocks, which may fluctuate considerably. Therefore the risk level is high.

Historical data may not be a reliable indication of the future performance of this fund. There is no guarantee that the risk indicator will remain unchanged, it may shift over time.

The lowest category of risk (1) does not mean that the investment is risk-free.

The material risks associated with the mutual fund are the following:

Market risk, i.e. the risk of decline in market prices and the consequent fall in prices of some of the securities contained in the mutual fund's portfolio, is high given that the fund invests in equities.

The expected credit risk (the risk of an issuer being unable to discharge its obligations) is low, because the mutual fund invests only slightly or not at all in debt securities.

The mutual fund's liquidity risk is low. Liquidity Risks arise when a specific underlying investment is difficult to be liquidated, causing possible difficulty to redeem your investment from the mutual fund.

UCITS DO NOT HAVE GUARANTEED PERFORMANCE AND PAST RETURNS DO NOT ENSURE FUTURE ONES

Lexicon

Alpha: Alpha is an extra rate of return - through means of active management - of a fund, over and above the return of the benchmark. In case of a positive alpha, the fund has performed better than the benchmark.

Annual management fee: The management fee is an annual cost expressed as a percentage. This fee will not be charged when you buy a fund. It will be withheld annually from the fund's return. It is payment for the fund's management.

Average Credit Rating: The average credit rating of the fund is based on the average credit rating of the fund constituents. In order to calculate the composite/average rating at the instrument level, Moody, Fitch and S&P ratings are used. The composite is calculated as an average based on the availability of the credit ratings. This composite rating is calculated for Fixed Income Instruments. The credit quality designations range from high ('AAA' to 'AA') to medium ('A' to 'BBB') to low ('BB', 'B', 'CCC', 'CC' to 'C').

Beta: The beta shows how the volatility of a fund is, compared to the wide market.

Benchmark: Predetermined, objective measure against which the returns of an investment fund are compared.

Duration: Measure for the interest rate sensitivity of bond prices. The longer the remaining average term of the bonds in the fund (higher duration), the more the bond prices will respond to an interest rate change. When interest rates go up, bond prices will go down and vice versa.

Fund: 'Fund' is a commonly used term for a collective investment undertaking.

Fund's Total Net Assets (Mln): The assets under the management of all share-classes of a fund.

Information Ratio: Benchmark for the risk of return when assessing the performance of a fund. The higher the information ratio, the higher the achieved rate of return per unit of risk.

Morningstar rating 3-years: A (quantitative) rating calculated over a three-year period, taking into account past returns and any price fluctuations.

Morningstar rating 5-years: A (quantitative) rating calculated over a five-year period, taking into account past returns and any price fluctuations.

Morningstar rating overall: The Overall Morningstar Rating is a weighted average of the independent ratings.

Morningstar Ratings: Morningstar is an independent provider of investment research. The Morningstar rating is a quantitative evaluation of the past performance of a fund. It takes into account the risks associated with a fund and the fees that a fund charges. The rating does not take into account any qualitative elements and is calculated using a (mathematical) formula. Funds are categorised and are compared with similar funds based on their score. They are then awarded between 1 and 5 stars. In each category, the first 10% receive 5 stars, the following 22.5% receive 4 stars, the following 35% receive 3 stars, the following 22.5% receive 2 stars and the last 10% receive 1 star. The rating is calculated on a monthly basis, taking into account past performance across periods of 3, 5 and 10 years, and without taking into account future markets or performance.

Net Asset Value (NAV): The net asset value (NAV) is the price of a sub-fund. The NAV is calculated by adding up the values of all products the fund has invested in and dividing this by the number of outstanding shares.

Ongoing Charges: The total annual recurring costs for an investment fund expressed as a percentage. They usually include the management fee, administrative fees, publication costs, etc.

Performance: Shows how the value of an investment fund has increased (or decreased) over the specified period. The return takes into account ongoing costs, but no entry fees, exit fees or taxes.

Rating allocation: An individual bond's credit quality is determined by private independent rating agencies such as Standard & Poor's, Moody's and BarCap & Fitch. Their credit quality designations range from high ('AAA' to 'AA') to medium ('A' to 'BBB') to low ('BB', 'B', 'CCC', 'CC' to 'C'). Investment grade bonds (ratings 'AAA' to 'BBB') usually have a lower level of risk than bonds with ratings 'BB' to 'C' that are considered as low credit-quality bonds.

Redemption fee: This is a one-off fee that may be charged when you want to leave the investment fund.

Risk and return indicator: This is the Synthetic Risk Return Indicator (SRRRI). It shows a sub-fund's statutory risk score on a scale of 1 (lower risk, typically lower return) to 7 (higher risk, typically higher return). The calculation is based on the sub-fund's volatility, so it takes into account the variation of the trading prices on the market. Volatility calculations usually cover five years.

Standard Deviation: The standard deviation tells something about the chance for a rate to fluctuate within a given range in the coming period. In case of a significant standard deviation (= high volatility), we speak about a large range of possible outcomes.

Subscription fee (max.): This is a one-off fee for buyers of an investment fund. It is usually expressed as a percentage of the capital you are investing. The provided percentage must not be exceeded in case of a maximum entry cost.

Tracking Error: The standard deviation of the difference between the monthly returns of a fund and its benchmark.

Yield to Maturity: Yield to Maturity is the return on a bond investment if it is held until the end of the term.

Yield to Worst: Yield to Worst is the measure of the lowest possible yield that can be received on a (callable) bond that fully operates within the terms of its contract without defaulting.
